UNSW Engineering’s Ambition

UNSW Engineering is the largest and most successful engineering faculty in Australia, ranked in the top 50 in the world and rising steadily. Our challenge over the next decade is not to consolidate our position but to make a major step change in our performance. Our ambition is to:

1. Raise the recognised quality of fundamental applied research to new levels;

2. Achieve significantly greater impact and translation of our research while transforming the way we collaborate with commercial partners;

3. Create unique, innovative and entrepreneurial graduates who are globally-focussed leaders;

4. Deliver this high quality education at scale through creating new and effective education methods including new technologies;

5. Recruit and develop outstanding staff with a focus on increasing the number of female academic staff, especially at senior levels;

And through these become a world top 25 engineering school.
